

Title: Introduction to HTML.

Aims:

- Getting an introduction to HTML basic.
- Getting practice to work with basic HTML tags.
- Getting practice to execute HTML file.

Task:

Basic Tags

HTML tag	Subscript and superscript tag
Head tag	Italic
Title tag	Bold
Body tag	Pre tag
Heading tag	Link tag
Paragraph tag	Marquee tag
Div tag	Table tag
Image tag	Order lists
Underline	

Activites:

1. Write the basic structure of the web document.
2. Print the following using paragraph tag
“Video provides a powerful way to help you prove your point. When you click Online Video, you can paste in the embed code for the video you want to add. You can also type a keyword to search online for the video that best fits your document. To make your document look professionally produced, Word provides header, footer, cover page, and text box designs that complement each other.”
3. Print the following output using heading tags

This is heading 1

This is heading 2

This is heading 3

This is heading 4

This is heading 5

This is heading 6

4. Write a code to link a word with the address of <http://www.google.com> and the web page should be opened in the same browser tab.
5. Write a code to insert an image using tag and set the additional attributes to the image (Ex: height, width, src, and alt).
6. Modify your code of Question 5 to link that image with the address of <http://www.google.com>.

Exercise:

Create a following paragraph in html using basic html tags.

Task:

- Print the paragraph using paragraph tag.
- Underlined words should be link with a website. (any website like google.com)
- Highlighted words can be any color.
- Highlighted words should be *italic* format.
- Other bolded, superscript and subscript letters should be like the same as the paragraph.

Superscript and Subscript ● A **subscript** (like H₂O) or **superscript** (like x²) is a character (such as a number or letter) that is set slightly below or above the normal line of type, respectively. It is usually smaller than the rest of the text. Subscripts appear at or below the baseline, while superscripts are above. Subscripts and superscripts are perhaps most often used in formulas, mathematical expressions, and specifications of chemical compounds and isotopes, but have many other uses as well.
